

Save the Children

Messages in a Bottle

Amplifying the voices of tamariki and rangatahi in
New Zealand on climate action.

Tēnā Koe,

As climate change continues to escalate, our young people are leading at the forefront of navigating this change and fighting for a better future for generations to come. We saw 170,000 young people march for climate change here in Aotearoa in 2019, but the weight of the climate crisis and responsibility of this is not on our young people to bear. It is on you, as our leaders to lead us through one of the biggest challenges this generation faces, climate change.

We have gathered messages from children and youth across New Zealand with their messages to you, our decision makers about the climate crisis. These pages are filled with over 150 messages from tamariki and rangatahi as young as 6 through to 22. These messages will also be presented to world leaders at the UN SDG Summit in New York this year alongside children's messages from across the globe.

These messages are filled with both hope and devastation, as we face one of the biggest crises in human history. We ask that you read these messages and make decisions with the tamariki and rangatahi of Aotearoa in mind, they are watching you. In the words of 8-year-old Ted, “Be brave and make strong, wise decisions.”

Ngā mihi nui for the work you do every day to make New Zealand a greater place to live in. You will see throughout these messages that your hard work does not go unseen, but also know that our children are counting on you to give them the future they deserve. Together, we can create change.

“Ehara taku toa I te toa taki tahi, engari he toa taki tini.”

My strength is not that of one but that of many.

Save the Children

"Our planet cries out for action, and we entrust you, our leaders, with the power to make a difference. Set aside short-term interests, embrace sustainable solutions, and forge a path towards a greener, cleaner future. Together, let us build a legacy of environmental stewardship, ensuring that the generations to come inherit a world filled with possibilities, not limitations. The time to act is now, and history will remember the choices you make today."

-Lola, 15

"Think of us. Think of our future. Make the change to make our lives better. Let us and the generations after us enjoy what you got to enjoy. You need to face the fact that we will be here after you- what do you want to leave behind for us?"

- Ayla, 16

"We should implement sustainability ratings for businesses and manufacturers. Many businesses out there use an abundance of plastic packaging and non eco friendly methods. Similar to a health star rating, a sustainability rating shows how well a business has used sustainable methods getting their product on a shelf e.g fully biodegradable no plastic packaging. High sustainability rating should be rewarded."

-Aarthi, 16

"Reduce plastic, ask the wider community for help or their opinions."

-Angie, 16

"End climate anxiety. I'm sick of feeling worried about growing up in a world that is broken."

"Give youth a platform to become involved in protecting our future."

Save the Children

Dear Whoever cares to listen.

We need options. Our world as we know it will be gone, and there is not much the public can do if we don't have options. It's very hard to be able to get access to lower emission every day options. Every day use items are full of plastic and their lower emission counter-parts are expensive. We need easy and affordable ways to get to our goal of 0 carbon emissions. What doesn't help is online fast fashion and cheap item websites such as Shein, Temu and Amazon, these online stores are very popular with our youth with being very cheap and easy to access.

I don't think you realize how worried our generation is about our future. Ever since I learnt about climate change I just stopped worrying about what I would do when I grew up, what's the point when we'll all be dead. I can no longer watch climate change documentaries or anything of the sort, for it reminds me of the lies I won't have. Please stop thinking about money and profiting off of some of the main causes we are in this situation and listen, please listen and give us the future we deserve.

-Mila C

"Dear Government and global leaders,

Before I get into complaining about what you aren't doing, I'm going to thank you for what you are doing. It's hard to be a politician, you have to deal with all the country's problems, and according to most media I've watched, climate change is the main problem. And according to them, you're deliberately failing to deal with it. I don't believe that. For one thing, climate change is a hard issue to tackle, mainly because every human on the planet is responsible for it. Everything we do in everyday life would be almost impossible without the use of greenhouse gasses, and while clean methods of obtaining energy (such as wind, sun, and geothermal energy) are on the rise, they are expensive and may not generate enough power to tackle how much we use everyday. These are problems that are put in your hands, which isn't fair, because we're all responsible and we should all right our wrongs.

As a kid, I loved animals and nature, especially penguins and octopi. However, I have recently learnt that some of these animals are paying the price for our junk addictions. Creatures such as our own Yellow-Eyed Penguin, are endangered, which means that my kids (should I choose to have some) might never see a real one. A possible solution could be more wildlife habitats and the extermination of pests like possums and stoats. We could make more areas of land wildlife reserves. We could have little underwater drones that would scan habitats for rubbish and test ocean acidification levels. Anything so that our beautiful whenua and moana can be enjoyed by every inhabitant of Aotearoa for centuries to come.

You have led us well in the past and I'm certain you can do it again. Thank you, for everything.

"I would like to see you putting the environment first!! You tell us that the damage has been done and that there is not much we can do, I believe that with a mindset like this nothing is going to change and is giving the wrong message across to people who believe that they can just keep doing what there doing put our earth at risk!! Enough is enough the first step in stopping this issue is changing the way that we look at it and how the local and global leader are spreading this message."

Dear Politicians

I am writing this letter because rubbish and other things are really bad for the environment.

Some animals are dying because of the rubbish.

Firstly, I would like to tell you about the rubbish. On the roads people are putting rubbish on the ground and sometimes bubble gum and it is disgusting!

So I was thinking maybe you could try getting rid of it, like for example putting some signs that say, please do not put rubbish on the road or please pick up rubbish and recycle them. Another thing that

is causing some trouble is electricity, because people are using more electricity than they need, so maybe you could tell them to use only the amount of electricity that they need.

So please make some solutions to the problems because I would really like it if we could save our planet. Please don't give up!

Love By Shenaya

2/8/23

Dear Politicians

I am writing this letter to you because I want you to tell people to stop leaving junk and trash on the floor because animals can die.

Like sea animals can die by eating plastic, paper, cans and popsicle sticks.

All that that causes is danger for animals that live in the ocean in the jungle the zoo and in the wild.

So I want you to tell them off with a consequence.

I hope I can meet you.

Keep going and never give up.

I love

Jojoquin

Dear Politicians

The problem is that we keep on vaping and smoking! Please make the vaping and smoking boxes more expensive like 200 dollars so people can't afford it. Why is it good? It's actually saving the population. My solution is that can you please tell farmers to stop showing cows and sheep cause they let out gas and gas is carbon dioxide. Gas make floods and thunder storms. It also pollutes the atmosphere. I want you to stop all that is happening right now. Never give up until you're all finished!

Dear politicians

I am sending you this

letter because we need

to start stopping people

from vaping and smoking.

Also dropping food. you can

do this by finding people

dropping food on the roads

and you can look for people

who are smoking vaping.

and when you find them,

please give them a consequence.

It's not good for the environment

so please stop it. Keep the good work

Dear Politicians

I'm writing a letter to you because I need you to

Save the planet by telling the bad people
to stop smoking. You have to stop them by telling

the people who makes them, to stop. If you stop

them there will be no more smoke. The second

thing I wanted to tell you is that there is too much

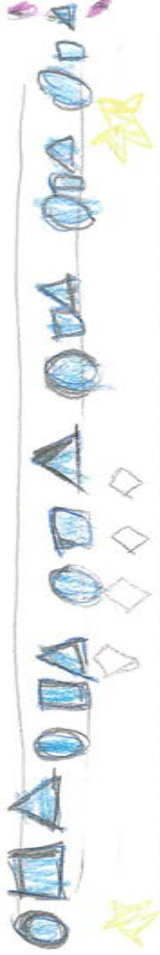

gas and we need you to help us by telling farmers

to grow vegetables and not to have cows because

they make gas. The last thing I wanted you to do is that

there is so much rubbish and we can stop
people by showing them and if they do it too
much they will go to Jail. Never stop being

good.
Love from: Cadence

2/8/23

Dear Politicians

I am writing about the problem and the solution. The problem is cows and sheep are making noise. The solution is you have to plant vegetables so it's great for the earth. The most important thing is don't leave rubbish on the floor. The bad or you will be put in jail. The bad news is the traffic is worse here. The good news is the traffic stops at weekends, so can you get more trains and bikes so there can be less gas.

Never give up until it's finished.

Dear Politicians

I am writing to you about saving the planet in all of the countries around the world. Gas, carbon dioxide, vaping and smoking is bad for the environment. We can stop the weather disasters in the world by you the Politicians stopping the farmers from having to many cows. We must stop the rubbish from getting on the ground. When I go to the school play ground I see rubbish and when I go to the Gannon Creek play ground, near the Gannon Creeks swimming pool, some times I go there and there was rubbish. One day when we ate there was a broken glass in front of my car door. If you see a person littering you better stop them. I hope these ideas will help you for saving the planet and you will not regret it.

Love, Cassie

Dear Politicians and world leaders,

My name is Hazel

I am 10 years old. I am from New Zealand and I am here to tell you about all the world wide problems and what we need to do to stop them.

Firstly single use plastic when we use single use plastic like plastic cups ,plates,cutlery and straws we are affecting ourselves animals and all the trees and people let me explain, after we have used single used plastic we put it in the bin but what happens after that it goes to the landfill but it doesn't break down like we think it does it creates methane which rises into the air and breaks the ozone layer and when the ozone layer officially breaks we humans will die out because the earth will get to much heat which leads to skin cancer and eye cataracts all the crops will dry up and there will be nothing this probably isn't a big worry for you but it will affect all of us. Think about the future generations.Did you know that 5.25 trillion pieces of plastic and waste are in the ocean right now you now what else is in the ocean sea creatures but do you know what the difference is they belong there. Plastic is taking over the ocean. There is also stuff like deforestation, world hunger, homelessness and child labour but we can only do one thing at a time. Thank you for listening to the future generation.

July 25th, 2023

Dear World Leaders

Please stop global warming by lowering EV's prices because EV's are good for the environment. Stop deforestation because we humans and animals need to breathe. Stop emissions like petrol and fossil fuels and we need to reduce, reuse ,recycle and stop unresuable plastic because they can't burn up and they take millions of years vanish. One last thing is that you need more reusable resources and so we can help the earth.

Sincerely

Pedro 11 Years

25.07.23

MESSAGE IN A BOTTLE

We need to cut less trees than we normally do in a year. In every year we cut down 15 billion trees so we need to cut less trees so we can have more oxygen to breathe so we can have the good air we need. Trees help to stop climate change. We should also make more electric cars because fuel cars pollute and that's not good for our environment. And we need electric cars to be cheaper so more people will buy them and and the environment won't be as bad as it is now. We should all plant trees to help stop climate change and get more oxygen to breathe!

Jasper.Age 9.

Dear world leaders,

My name is Riva and I live in New Zealand . I strongly believe that we should do something about greenhouse gasses because these icebergs are melting and these sweet polar bears are drowning and these polar bears can't swim forever you know . So why would you world leaders say yes to an 8 year old child like me. Firstly who doesn't love polar bears they're, just adorable especially when they are babies.

Secondly 800 to 1,000 polar bears are killed each year by hunters. Lastly if greenhouse gasses melts the ice then that will mean that not only polar bears will have to swim forever but Seals, Penguin and Arctic Foxes and Arctic Foxes can't swim so they will drown and your crazy if you think Arctic Foxes are not cute there more than cute they're adorable.

So this is why you world leaders should do something about greenhouse gasses.

By: Riva Fernandez .

Dear World leaders,

My name is Bella, I am 11 years old and I'm from New Zealand and I want to tell you about climate change. You all probably know what climate change is, and you can probably think of many ways to end it. So I am here to tell you more ways to end climate change just in case you've run out.

There are thousands of people in the world that have the brain to think of ways to end climate change but are using their wonderful minds on going to space when they could easily help the rest of the world by recycling, getting compost bins, and maybe even start picking up trash whenever they go on walks aka 'palking' (picking up trash while on a walk).

Have you ever wondered what the world would look like if plastic was never invented? Well, first of all your computers, phones, clothes, and adapters wouldn't exist without plastic. We would also probably get eaten by wild animals like Rhinos way faster. So we basically could never be able to live without plastic being invented. But now plastic has become a huge threat so the only question we could ask now is how do we fix this? We can do things like say no to plastic cutlery, single use plastic, plastic straws and more.

If we are being more realistic, we will never end climate change as the only way we can stop it is by getting to 'net zero' carbon emissions by 2050 or sooner. Net zero means that no more carbon is getting dumped into the atmosphere than it is taken out. Hopefully one day we can live life without knowing that future generations will have to deal with the big mess that people in the past left behind for us.

***As you know, there is a crisis going on in the world. The name of the crisis is... CLIMATE CHANGE!!!! I want to stop climate change. We want to stop climate change and make the world a better place for everyone to live in. We should start by reducing the greenhouse gases we produce, like fossil fuels. We should also reduce the plastic we use and reuse things like plastic bottles, if they are in good condition, because most of our plastic ends up in the ocean. Politicians around the world should make bigger clean car rebates for all EVs and Hybrid vehicles. They should also make electricity cheaper and add more free EV chargers.
Yours sincerely,
Dishan, age 10, NZ***

Hi I am Kellan

I think we should plant more trees because we need them to LIVE! Trees provide us with oxygen. Trees get rid of the bad greenhouse gases that are causing climate change. Using electric cars would stop us putting more greenhouse gases in the world too.

So do you want to stop climate change?

Kia Ora to all the Politicians, World leaders and citizens.

My name is Jiezi and I want the world to be a better place, so allow this nine year old to share her perspective.

Climate change, Pollution, Deforestation and World Hunger, are some of the problems that are happening in the world. We want this to stop, don't we? What are you going to do to stop the active world problems? We can start to stop burning fossil fuels. Try to bike to work or school and STOP cutting down trees for farms, food or bigger land. There are poor, helpless animals out there that need a home. When we cut trees we are taking away THEIR home. How would you feel if someone took your home away from you? Think about the turtles. Plastic bags end up in the ocean then turtles eat them because they think it's jellyfish and the whole process repeats again. Around eight million pieces of plastic enter our oceans every year. Humans rule, plastic doesn't.

Dear World Leaders.....

Talofa, my name is Azaria. I'm 9 and I'm from New Zealand. Today I'm going to tell you why I think we need to change the earth and environment to make it a better place.

I am not happy with what we are doing with our environment. It's supposed to be winter but NO it has felt like summer all year long, which is great but we really really need to stop climate change. Why are we letting people cut down trees, we need trees to breathe so why waste people's time and effort when it's only doing harm. So I know I don't have many facts but we all know we need to make an end to climate change.

Love from: Azaria 🌴🌳🌱

Hello World Leaders,

My name is Uriah and I am here to talk about climate change and tell you to make a change.

Climate change can cause an effect on trees that could evaporate them and we won't get oxygen because trees turn carbon dioxide into oxygen and there is no other place to buy or get oxygen other than trees. If we left climate change to do its thing, climate change will undo a lot of humanity's progress made over the years in development. It will also cause tree deforestation. We need to stop littering in water because it will kill sea life animals.

And that is all I'm going to say so GO MAKE A CHANGE

Dear Politicians,

My name is Zia. I'm 10 turning 11 yrs old and I live in New Zealand. I would like to tell you some of the problems in the world that include climate change. First of all I would like to talk about one of the biggest problems. Plastic! There are 5.25 trillion pieces of plastic waste estimated to be in our oceans. Plastic will harm sea life and kill lots of animals. Most of the time sea turtles think that plastic in the ocean are jellyfish which is their favourite food. And the worst part is it doesn't break down after a long long LONG time. Here are some ideas to fix this situation. You can find ways to recycle all types of plastic, stop single use plastic and in super markets we can stop using plastic bags like what we do here in NZ. Don't you think it would be great to use all these great ideas all over the world. Moreover another problem we don't want is Emissions also known as greenhouse gasses. Some examples of greenhouse gasses are petrol (fossil fuel) and methane. Another situation is we are cutting down too many trees. Trees give us carbon dioxide so we can breathe and also help animals to hide when they are in danger. We want to stop deforestation. Now that I have explained what we don't like here is what we do like. We would appreciate more renewable resources (organic products) and composting. Another problem is that cars create pollution. To fix this problem we should use more electric cars except most people are already happy with the car(s) they have because of the price of electric cars. To fix this we can have bigger clean car rebates or even make electricity cheaper.

I hope I have well explained the situation's that include climate change. I know that you are definitely the right people to help with climate change and maybe you can use some of these ideas as much as possible.

From: Zia

Message in a bottle

Talofa my name is Madeleine I'm 9 and I go to school in NZ.

I would like politicians and leaders around the world to know we have a huge problem: Climate change.

As you know the world has just passed the hottest day ever recorded which means global temperatures are rising and we don't have forever to fix that.

WHAT CAN WE CHANGE?

We can easily start by planting more trees, stop single use plastics and ban smoking.

OTHER IDEAS:

Make Electric cars cheaper and stop greenhouse gasses.

WHY YOU SHOULD AGREE:

Cutting down trees is affecting the bird and guess what animals are getting affected more than us!

Do you want future humans to have a bad life and constant sickness for something we have done.

After this I hope you can consider changing the world even just a bit. Thank you for listening and thank you for your time.

Hi Leaders of the World,

Today I'm here to tell you about how to make the world a better place. We should start by using more recyclable packaging and make recycling bins to recycle all plastic packaging. We should also make biodegradable packaging which is organic and it will always disintegrate in the soil, which is great for the environment. The second thing is that over here in NZ there is a big crisis with the cost of living. With petrol costs rising and groceries going up by 12.5% in today's market we should make petrol cheaper and increase clean car rebates for Hybrids, plug-in Hybrids and EV's.

Dear World Leaders,

I am here to tell you the **turtles** are becoming endangered, because in the past 100 years people demanded **turtle** meat, **turtle** eggs, **turtle** skin and **turtle** shells. **Turtles** are getting endangered because people are polluting, so we all need to stop polluting for the **turtles**. This is why we should protect the **turtles** by stopping pollution.

By : Cristelle, NZ

Kia Ora, World Leaders and Politicians,

I'm an 11 year old girl and speaking my mind about climate change.

Climate change is a problem that has been around for years. Don't you think it's time to stop it? Climate change causes hotter temperatures which mean greenhouse gas concentrations rise and so does the global surface temperature...

One of the huge problems is single use PLASTIC. Single use Plastic is bad for the environment. I strongly recommend using paper instead of plastic. Now in New Zealand, I don't see plastic straws anymore, which was an EXCELLENT decision. We need to do more like that. For example, if you're hosting a party, use PAPER cutlery and / or metal ones. When we use plastic, it NEVER goes 'away'. When I'm asked to put away my stuff, I know where it goes. It has a place, but plastic does not. Single used plastic never breaks down. Unlike paper it rips and disintegrates. Now I'm not saying "It's ok to litter paper" I'm saying paper is better for the environment.

Plastic is bad for the ocean too. A lot of the time turtles think plastic bags that are thrown into the ocean are jellyfish, which is their favourite food. They tend to eat it and it builds up in their stomach causing them to not have any space left in there to eat. Leading them to die. Same goes with other sea creatures. Land animals are also impacted by littering. Poisoned by spoiled food and food wrappers, that mostly contain contaminated foods. This can lead to sickness, internal health problems and even death. Remember rubbish belongs in the bin, I don't think our planet is the trash.

Think about future generations. Think about the animals. Think about Climate change.

Our future is in your hands. Do the right thing.

-Isabella from NZ

Dear Politicians,

My name is Zia. I'm 10 turning 11 yrs old and I live in New Zealand. I would like to tell you some of the problems in the world that include climate change. First of all I would like to talk about one of the biggest problems. Plastic! There are 5.25 trillion pieces of plastic waste estimated to be in our oceans. Plastic will harm sea life and kill lots of animals. Most of the time sea turtles think that plastic in the ocean are jellyfish which is their favourite food. And the worst part is it doesn't break down after a long long LONG time. Here are some ideas to fix this situation. You can find ways to recycle all types of plastic, stop single use plastic and in super markets we can stop using plastic bags like what we do here in NZ. Don't you think it would be great to use all these great ideas all over the world. Moreover another problem we don't want is Emissions also known as greenhouse gasses. Some examples of greenhouse gasses are petrol (fossil fuel) and methane. Another situation is we are cutting down too many trees. Trees give us carbon dioxide so we can breathe and also help animals to hide when they are in danger. We want to stop deforestation. Now that I have explained what we don't like here is what we do like. We would appreciate more renewable resources (organic products) and composting. Another problem is that cars create pollution. To fix this problem we should use more electric cars except most people are already happy with the car(s) they have because of the price of electric cars. To fix this we can have bigger clean car rebates or even make electricity cheaper.

I hope I have well explained the situation's that include climate change. I know that you are definitely the right people to help with climate change and maybe you can use some of these ideas as much as possible.

From: Zia

Dear World Leaders...

Hello, I'm Charles from New Zealand and I am telling the world leaders right here right now that **YOU** and everyone else in the world has to do something about the crisis happening right under our nose aka **CLIMATE CHANGE** !!!

All these arctic animals, scccccccccccc many animals are dying and penguins Can't fly so if the climate warms up and the ice melts they will have nowhere to go. We need to grow more trees, basicaly everywhere On earth because they take away carbon dioxide.

Please help us achieve our goal!

Please make a change that will reduce climate change if you see this letter.

Sincerely-Charles

Dear world leaders,

Hi I'm Allegra from New Zealand and I am 8 years old and I'm going to tell you why I think we need to change some things about the environment and how we treat it.

We need to look after the environment so we can live, without it we can't live and all the animals will die. So I will tell you how to stop that from happening. Things we want. Renewable resources, organic products, more trees and no deforestation, electric cars and recyclable plastic. Things we don't want. Fossil fuels greenhouse gases like carbon dioxide and methane, less farming, unrecyclable plastics because it kills animals and emissions. Here are all the things we need to start doing and all the things we need to stop doing.

By: Allegra

Save the Children

"Consumerism fuels so many parts of our lives - our decisions, our purchases, the effort we put in to our work - but we cannot let consumerism fuel the way our future unravels. Single use plastic, multipack chips, and single serve products need to be slowly prohibited from production. The increase in compostable or recyclable packaging means there are other options to use, and we need your help to enforce the use of these options, so that we don't let consumerism rule the way our product and packaging affects climate change. It's up to you, and the answers are there. Please make the difficult choices to protect our planet. "

- Student from Selwyn College
